

Reflection-symmetry probes: every treatment lane lost to a control

Idea 5 signed laterality: INFORMATIVE NULL

Idea 9 arm 1: ARTIFACT (a side-agnostic control beat the antisymmetric lane)

source-disjoint R^2 (higher is better; 0 means no better than predicting the fold mean)

Lane B recovers the target from raw coordinates almost perfectly, so the target and the pipeline are sound. Both learned lanes still fall below their own floors.
