

Two studies expose different breaks in the evidence chain

Each result has its own cohort, target, metric and verification boundary.

LATERALITY

625 clips / 93 source videos

Hidden-feature matching becomes more consistent.

Signed movement readout becomes worse.

Initial R2 0.223 > trained 0.101-0.114

Retained aggregate evidence; local raw predictions and fitted checkpoints unavailable.

FUTURE INNOVATION

50 clips / 43 source videos

Safe scaling and exact baseline fallback pass checks.

Skeletons add no supported value beyond RGB.

Matched increment: -0.00024242 R2

Saved models and paired source-bootstrap scores independently reconstructed.

Next measurement: access to a declared motion observable

Separate symmetry, temporal order, prediction and student benefit.

Evidence synthesis. The two R2 definitions and target spaces must not be compared numerically.
