

Left-right sensitivity does not establish temporal-order sensitivity

Schematic observables under anatomical reflection M and time reversal T.

	Reflection-even	Reflection-odd
Time-even	Overall median speed Keeps its sign under M and T. Magnitude can ignore ordering.	Left-right speed contrast Changes sign under M. Unchanged under reversal T.
Time-odd	Mean vertical displacement Unchanged by anatomical M. Changes sign under reversal T.	Left-right displacement contrast Changes sign under M and T. A direction-sensitive observable.

Exact symmetry can hold for a zero representation. Accuracy must be tested separately.

T is an analysis operation on a bounded sequence, not a label-preserving forecast augmentation.
